# Advanced Dental IT Security

*Protecting Patient Information and Health Remain Priorities*

Ensuring safety and well-being is a fundamental commitment to your patients. When a patient sits in your dental chair, he or she is placing trust in you and the care you provide.  Similarly, your patient expects the same level of safety with your dental IT services.

The real truth is that today's security threats are evolving and becoming increasingly complex. Having the right practice management software and monitoring systems in place is crucial to security.  PerCSoft's seasoned team provides expert-level IT knowledge & service to keep your practice secure.

PerCSoft's technicians are uniquely proficient in multiple security and monitoring systems including: Dentrix/Easy Dental, Eaglesoft, and Carestream (Softdent, Kodak).  Being well-versed with major software platforms allows PerCSoft to easily make recommendations specific to your practice's security needs. PerCSoft is also dedicated to training and ensuring you are using your technology to its fullest capabilities as soon as possible. Their extensive knowledge ensures any problems you encounter are fixed rapidly.

Currently, dental IT companies are providing different tiers of security, i.e. basic to elite, with increasing levels of cost. With PerCSoft **elite level security is the standard** at an affordable price.

No security is foolproof, but PerCSoft technicians are well-equipped to remediate emergencies of all shapes and sizes, with recently proven results. For more information on PerCSoft security and cost savings, call us today at 262.920.2891 and ask for the PerCSoft edge.
